CONCLUSION

On 25 March, the first day of the lockdown, nearly all services and factories were suspended. People were hurrying to stock essentials in some parts. Arrests across the states were made for violating norms of lockdown such as venturing out for no emergency, opening businesses and home quarantine violations. The government held meetings with e-commerce websites and vendors to ensure a seamless supply of essential goods across the nation during the lockdown period. Several states announced relief funds for the poor and affected people while the central government was finalising a stimulus package.

Unemployment, hunger, migrant worker crisis and widespread loss of access to healthcare hit India badly and with the tremendous effect on economy, GDP contracted by 23%. With continuous increment of the cases, India crossed all the records and touched a highest of more than ninety-seven thousand cases in a day.

On a positive note, this pandemic has raised our benchmarks and our generation has explored a new dimension of possibility. From announcing the result within a week to making Supply Chains more robust, we pushed our boundaries.
